

SHT1x and SHT7x Sample Code

Humidity & Temperature Sensor

Introduction

This application note presents an example of a code in C to achieve the following:

- Readout of Humidity (RH) and Temperature (T) from SHT1x and SHT7x sensors with basic error handling
- Calculation of RH linearization and temperature compensation
- Access to status register
- Dewpoint calculation from RH and T values
- UART handling (communication with an external device such as a PC)

1. Sample Code

```
*****
Project:          SHT1x/7x demo program (V2.4)
Filename:         SHT1x_sample_code.c

Prozessor:        80C51 family
Compiler:         Keil Version 6.23a

Autor:            MST
Copyrigth:        (c) Sensirion AG
*****  

// Revisions:  

// V2.4 calc_sht11()           Coefficients for humidity and temperature conversion  

//                                changed (for V4 sensors)  

//      calc_dewpoint()          New formula for dew point calculation  

  

#include <AT89s53.h> //Microcontroller specific library, e.g. port definitions
#include <intrins.h> //Keil library (is used for _nop()_ operation)
#include <math.h>     //Keil library
#include <stdio.h>    //Keil library

2. Revision History

Date	Revision	Changes
November 20, 2001	0.9 (Preliminary)	Initial revision
February 19, 2001	1.00	
July 10, 2002	2.00	Added delay of 0.8s between measurements to prevent selfheating Connection reset only after error during transmission Checks for RH<0% and >100%
October 23, 2002	2.01	Changed sign of Temperature coefficient T1 to match datasheet.
Oct. 17, 2003	2.02	Changed download link
July 15, 2004	2.03	Added comments about UART function
May 25, 2005	2.04	Changed company address
April, 28, 2006	2.05	The function calc_dewpoint is updated with the new Magnus parameters. This improves slightly the accuracy at low humidity and low temperature.
Oct 3, 2006	2.06	Sensirion Inc. address added
November 24, 2010	2.07	Coefficients for humidity and temperature conversion changed (for V4 sensors) and addresses of new sales offices added.
